The gold standard in laser hair removal. Fast treatment times.

Long Pulse Laser work by selectively targeting the hair follicle with intense pulses of light energy for thermal destruction, but without damaging the surrounding tissue. The epidermis is protected by the dynamic cooling device, which sprays the treatment area before each laser pulse with a liquid cryogen coolant. This system provides a cooling protection factor over 50% greater than contact or air cooling and can be adjusted to individual needs to make the procedure as comfortable as possible!

State-of-the-art technology

☑ Powerful, state-of-the-art laser technology with over 10 years of leadership and proven results.

Suitable for all skin types

☑ Highly rated by patients and trusted by dermatologists worldwide.

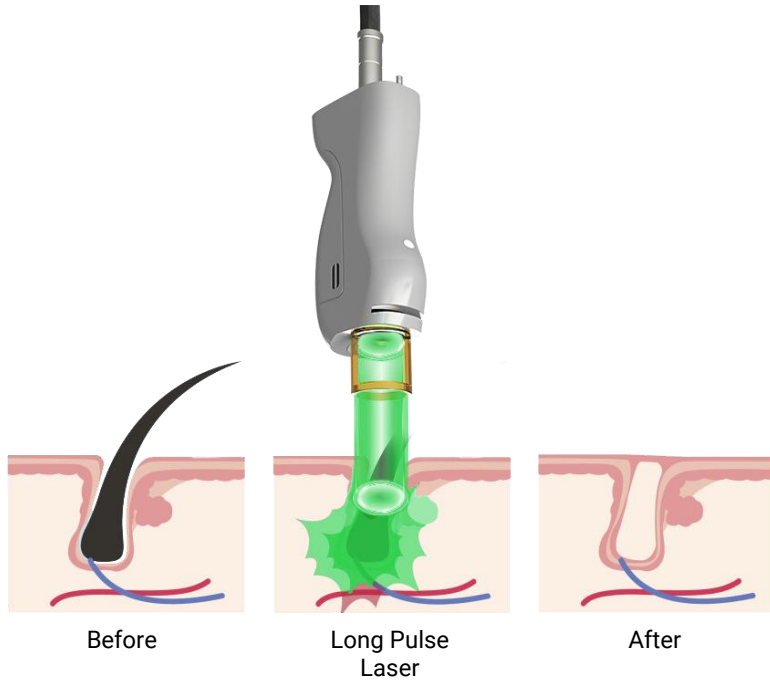

Quick, in-office procedure

☑ Fast, efficient, and convenient treatments keep sessions as short as possible.

Long Pulse Laser State of The Art Technology

Long Pulse Laser is powered by a binary laser emission of Nd:YAG (1064nm) and Alexandrite (755nm) wavelengths with synchronized and adjustable proportions. Choose the optimal wavelength to maximize efficacy and comfort for laser hair removal, pigmented and vascular lesions treatment and wrinkle reduction, regardless of the patient's skin type. At 5000W output power, Long Pulse Laser provides a rapid coverage rate, combining high fluence, large spot size and high repetition rate.
