

RenaFace[®]

- Non-invasive Facial treatment
- 23% Lifting
- 30% Muscle Tone Increase

Winkonlaser
Bringing Beauty and Love by Technology

What is RenaFace®?

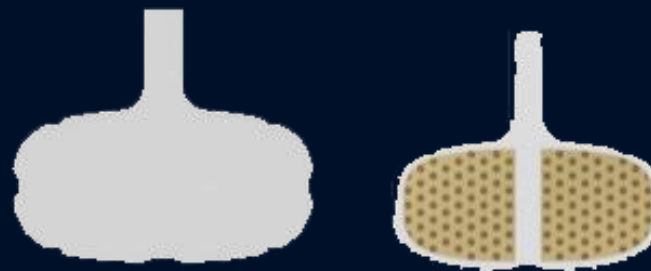

RenaFace is a non-invasive facial treatment device that simultaneously treats facial skin and muscles using a combination of Synchronized RF and HIFESTM energies. It remodels and smooths skin, increases collagen and elastin fibers, and selectively contracts facial muscles to elevate and restore facial tissues. RenaFace is a hands-free device and requires no pre- or post-preparation, making it a simple and easy procedure with no downtime or recovery.
